Introducing the Parrott™ Jamaica Digital USB Headset System

The industry leader in speech recognition headsets has done it again. VXI introduces the low-cost, fully functional Parrott Jamaica USB digital microphone headset system.

The Parrott Jamaica was created specifically for today's speech recognition, voice command and control, Internet telephony, voice recording, voice chat, and on-line gaming applications, as well as for listening to CDs and MP3 music.

Patterned after the highly successful Parrott line of speech recognition headsets, the technologically advanced Parrott Jamaica USB headset system was developed by VXI R&D engineers to support Windows® 98 Second Edition, Windows® 2000, Windows® Me, and Mac® OS 9.0.4 or 9.1 operating systems.

The Parrott Jamaica USB headset and Translator™ system, in addition to providing superior speech recognition, is simple to install, easy to use and the microphone does not require a sound card.

Maximum voice clarity, VXI Parrott Translator technology, USB port connectivity, and a low cost – only from VXI.

Parrott Jamaica Digital USB Headset System Features:

- One-way USB audio operation (digital microphone) with mono receive (analog earphone) headset
- Consistently clear audio input and output
- Microphone does not require a sound card - no sound card distortion - no microphone bias requirements - self powered
- USB sample rates controlled by host: 8, 11.025, 22.05, 44.1, or 48kHz
- CD quality playback
- Translator housing for USB circuitry and frequency shaping
- Translator green LED provides USB power indication
- Attractive graphite color
- Two year unconditional warranty
- System Requirements: Requires a USB Port Windows® 98 Second Edition, Windows® 2000, Windows® Me, Mac OS 9.0.4, or Mac OS 9.1
